

PACE Land data Users' Group

Building capacity and community for PACE's advanced terrestrial observations

WELCOME! Meeting starts at 2pm EST, USA (-5:00 UTC)

Agenda:

January 22 2026

- 1) PACE Mission & Applications Updates**, Morgaine McKibben (NASA GSFC/SSAI)
- 2) Fall Foliage through the Eyes of PACE**, Fred Huemmrich (University of Maryland, Baltimore County)
- 3) From Hyperspectral Indices to Global Fluorescence: PACE Vegetation Indices as Predictors of Terrestrial Photosynthesis**, Caleb Harmon (Virginia Tech)

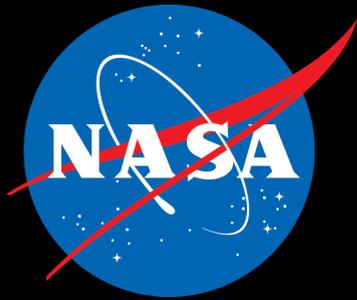

PACE

PACE Land data Users' Group: Winter 2026

Morgaine McKibben, PhD
PACE Applications Lead
NASA Goddard Space Flight Center / SSAI

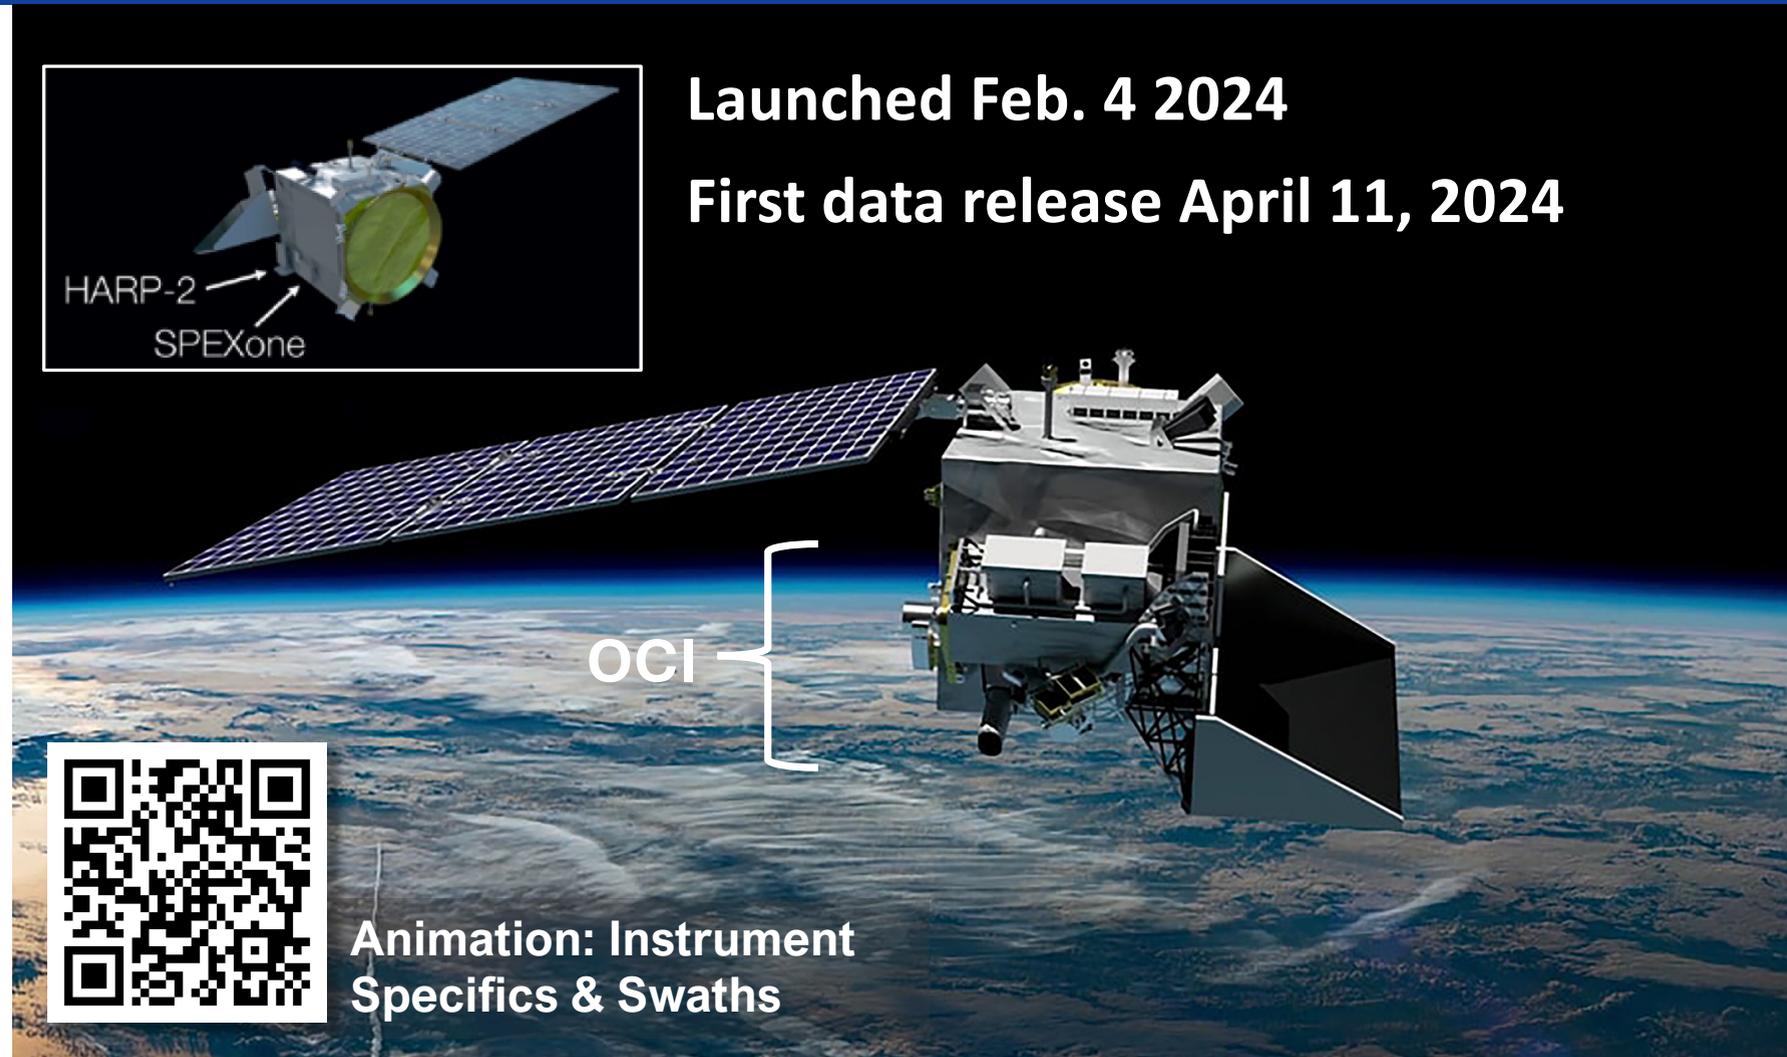

January 22nd, 2026

PACE Mission & Terrestrial Products

Brief review on PACE mission & updates on terrestrial product offerings

Watch our first meeting for mission details:

https://pace.oceansciences.org/event_archive/landDataUserGroup.htm

- Polar orbiting, 13:00 local equatorial crossing time
- OCI: $\sim 1.2 \text{ km}^2$ spatial resolution
- OCI: 1-2 day revisit, global coverage
- Data products free to all

3 instruments aboard:

- OCI: Hyperspectral radiometer (UV-VIS-NIR @5nm; 7 SWIR)
- HARP-2: hyperangular/multi-spectral polarimeter
- SPEXone: multi-angular/hyperspectral polarimeter

PACE is advancing & extending ocean biological, ecological, and biogeochemical data records, as well as cloud, aerosol, [and terrestrial!] data records.

PACE provides advanced, hyperspectral-enabled products AND heritage products for land, atmosphere, and oceans.

PACE Land data Users' Group focuses on terrestrial data products below from PACE-OCI
(land-relevant polarimeter products in future as they become available)

NEW, hyperspectral-enabled, only from PACE

- Surface Reflectance (122 bands)
- Photochemical reflectance index (PRI)
- Chlorophyll Index Red Edge (CIRE)
- Carotenoid Content Index (Car)
- Modified Anthocyanin Reflectance Index (mARI)

HERITAGE Terrestrial Indices:

- Normalized Difference Vegetation Index (NDVI)
- Normalized Difference Water Index (NDWI)
- Normalized Difference Infrared Index (NDII)
- Normalized Difference Snow Index (NDSI)
- Enhanced vegetation index (EVI)
- Chlorophyll-Carotenoid Index (CCI)

Full descriptions of products: https://pace.oceansciences.org/data_table.htm#category4

Review our first meeting for data details: https://pace.oceansciences.org/event_archive/landDataUserGroup.htm

PACE Land data Users' Group (PLUG)

Building knowledge & capacity for PACE's advanced terrestrial data products

How do I join?

Subscribe to the PLUG mailing list (light on email traffic)

- Email pace-land-community-request@lists.nasa.gov, with “subscribe” in the subject
- Confirm your email address when prompted. Welcome email = success!

How do I participate?

YOU help determine PLUG meeting content.

- **Attend our quarterly meetings.** Bring your questions!
- Email us if you would like to present!
- **Respond to short, post-meeting surveys.** Your input guides meeting content.

Check out our previous two meetings:

https://pace.oceansciences.org/event_archive/index.htm

Join us: PACE Applications Partners/Early Adopters

Seeking *terrestrial* Applications Partners!

- **PACE Applications works with individuals and groups across public, private, non-profit, university, etc. sectors** who are looking integrate PACE data into applied science, decision-making, policy, research, business, resource management and more.
- **Partnerships specifically amplify applied research and development efforts** to foster and accelerate the translation of PACE observations into action

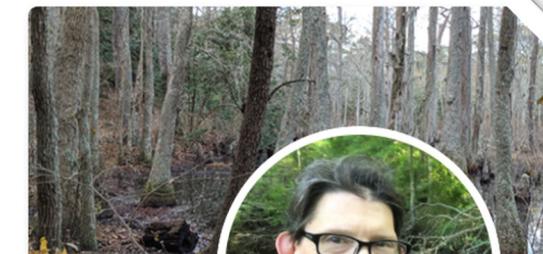

← **Learn more, see examples of Applications Partners, and consider APPLYING!!**

https://pace.oceansciences.org/app_adopters.htm

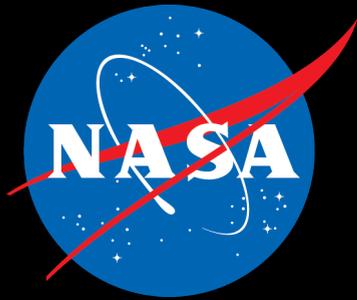

Questions? morgaine.mckibben@nasa.gov

PACE Mission & Applications Updates

Key changes and updates since our last meeting

PACE Data Updates (since summer 2025 PLUG meeting)

Please review our first meeting if you are not familiar with our data levels & versions:

https://pace.oceansciences.org/event_archive/landDataUserGroup.htm

Current data version:

Now: Version 3.1, full mission (March 2024-present)

You asked, we listened!

Level 3 mapped land data products now available at 2km; previously highest Level 3 spatial resolution was 4km

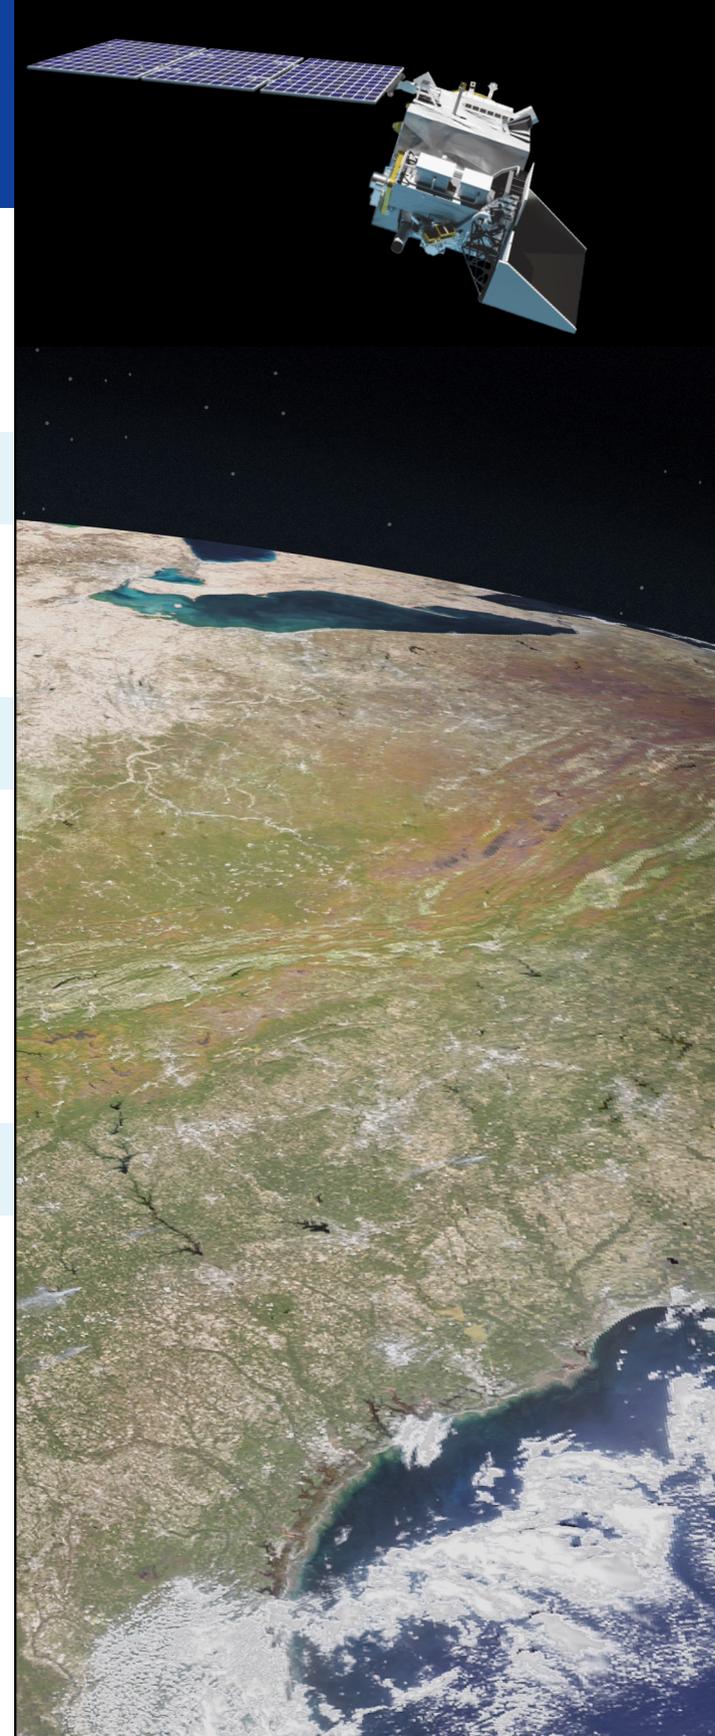

- **Now: Full-mission coverage (March 2024-Present)**

Coming soon: Nitrogen Dioxide (NO₂, Vertical Column Density)

- PACE NO₂ product has ~2 km spatial resolution with near-daily revisit. Ozone (O₃, VCD) also provided. Release will be announced via group email.
- Broad applications: Fire, Air Quality, Agriculture, etc

Presentation from PI with product details:

https://pace.oceansciences.org/event_archive/CoP_Quarterly_Telecon_2025.htm

 - PACE-OCI Part II

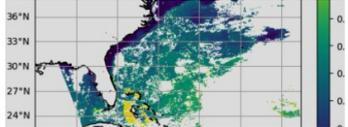

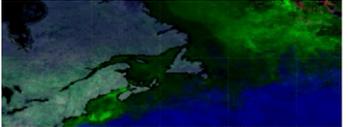

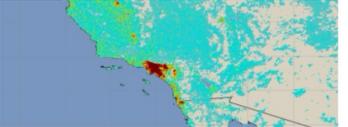

Help Hub - Satellite data processing can be difficult.

We're here to help you climb out of that hole!

This constantly updated collection of Jupyter notebooks is meant to help you get started accessing, visualizing, and analyzing OB.DAAC (Ocean Biology Distributed Archive Center) data products with Python. You can learn from these notebooks either by viewing the code and results on this webpage, or by downloading the notebook files by using the download button in the upper right and selecting .ipynb, and running them with [JupyterLab](#). If you plan to run any of these notebooks but don't know how to start, please continue to the next section for information about the Earthdata Cloud and environments in Python. If you are familiar with running our notebooks, feel free to explore the Help Hub's different sections:

Help Hub Core

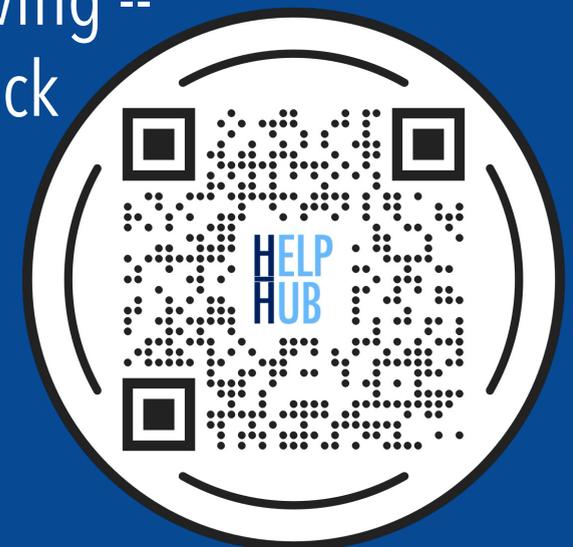

Explore these themes to get essential skills to access, process and visualize data.

<h4>Data Basics</h4>  <p>Learn fundamentals of accessing and processing data products.</p> <p>Learn More →</p>	<h4>Visualizations</h4>  <p>Find out how to make visualizations with data from various instruments</p> <p>Learn More →</p>	<h4>Cloud & Atmosphere</h4>  <p>Explore atmospheric and cloud data products including aerosol retrievals and trace gases.</p> <p>Learn More →</p>
<h4>Land Surface</h4>	<h4>Ocean</h4>	

Help Hub has a new look! This resource helps you learn about satellite data processing, including many PACE mission tutorials.

The Help Hub groups together our very best training materials and is constantly improving -- keep checking back for more!

Mission Spotlight

PACE Data Now Available Through EGIS Services

Ten PACE data products in service of ocean, atmospheric, and terrestrial applications are now provided through Earthdata Geographic Information Systems (EGIS) imagery services. EGIS provides cloud-native, GIS-ready data that complies with ArcGIS and Open Geospatial Consortium (OGC) standards, allowing GIS users to easily find and utilize NASA data. This effort directly bridges PACE data with the broad domain of GIS end users for the first time, including being discoverable in the ArcGIS Living Atlas of the World. [Read more »](#)
